

LEADERSHIP BRIEFING

Deep Research AI

Automated Sustainability Intelligence at Scale

Briefing for Leadership | Aug 2026

The Problem

Most companies don't have a strong reason to invest in electrification — so how do we find the ones that do?

Manual & slow

Reading filings and reports by hand — hours per company.

Inconsistent results

Manual work yields inconsistent research and missed signals.

The answer: research sustainability signals from open web to find the leads worth pursuing.

What We Built

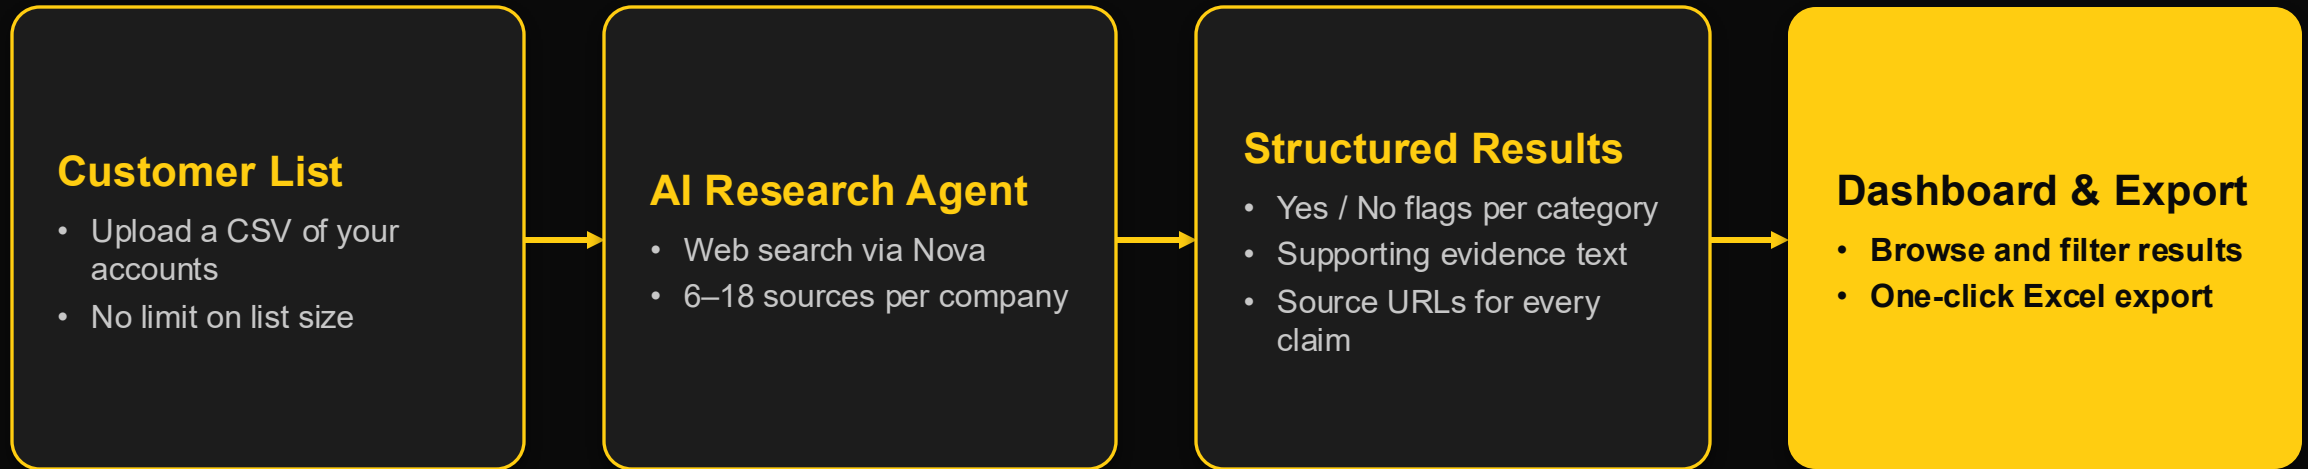

An AI-powered research platform that profiles any company in ~90 seconds

Research Category	What It Tells Us
Emissions Reductions	Has the company made GHG or net-zero commitments?
Investment Commitments	Has it announced capital for clean technology?
Machine Purchases	Has it bought relevant equipment?
Pilot Projects	Is it running active sustainability pilots?
Environmental Constraints	Are there regulatory or environmental pressures?

Every finding includes a source URL and direct quote — no black boxes.

What's New Since Last Time

From a customer list to structured, cited results

AWS + Langchain

Corporate-approved stack

Snowflake Integration

Pipe research results directly into Snowflake tables

Results at Scale

We ran this on our full customer list — here's what happened

1000+

Companies processed — 99.6% success rate

~32 sec

Average time per company

~38 min

Full list — versus weeks manually

20

Companies processed concurrently

~19×

Faster than sequential processing

< \$0.05

Cost per company

What would take a team of analysts weeks, the platform completes in an afternoon.

LEADERSHIP BRIEFING

CAT Interact

AI-powered Work Order Urgency Ranking

Briefing for Leadership | Aug 2026

The Problem

Why urgent work slips through today

THE CORE PROBLEM

Urgent work gets buried and missed

Lost in daily volume — risking customers and revenue

Next step is unclear

Users can't tell the next best action on each order

WHAT THE SYSTEM SHOULD DO

Prioritize work orders and suggest a clear recommended action for each

What's New Since Last Time

01

**AI-powered ranking
engine for work orders**

Built from the ground up

02

**Ranks every work order
by urgency**

03

Outputs for every work order

Priority band

Top issues

Recommended action

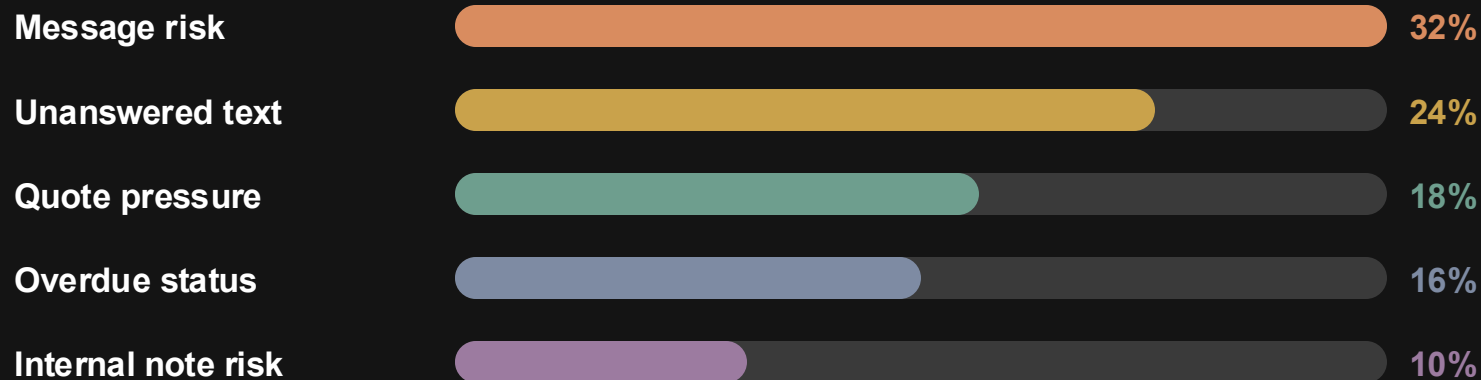

How Ranking Works

SCORE BREAKDOWN

Base urgency is built from 5 weighted signals

Base urgency

+ Overdue boost

Final score = Base urgency + Overdue boost
